MiTRAA TaskFlow: Frontend BRD

Version 2, redesign to the TaskFlow reference · Oct 31, 2026 · @Deenesh

This version keeps everything the first BRD said about the seven captured screens and adds three things: the **look** the whole app must follow (the TaskFlow reference mockup and the five-colour palette), a new **Home Dashboard** screen, and the **changes** each existing screen needs to match. The working product name here is MiTRAA TaskFlow; the first BRD said MyMitraa and the live screens still show Optima, so the name is an open question at the end.

## What changed in this version

| Area | Change |
|---|---|
| Look and feel | New design direction: rounded cards, soft tinted backgrounds, violet sidebar, penguin mascot, and a fixed five-colour palette (Violet, Fuchsia, Lime, Sky Blue, Charcoal). See Design direction. |
| Home Dashboard | New landing screen from the reference: welcome banner, overall progress, four KPI cards, My Tasks, Upcoming Schedule and a progress banner. See Home Dashboard. |
| Frame | Search moves to a top bar, the user card becomes an avatar menu (Change Password and Sign out inside), the power icon goes away, and the 12 menu entries are grouped. |
| Reports | The old Dashboard (charts) is renamed Reports, so the word Dashboard can mean the new Home screen. The route /task-dashboard stays. |
| Existing screens | Each requirement is marked Keep, Restyle, Changed or New. Bugs seen in the captures are now requirements, not just notes. |
| API gaps | The reference shows things the 102 endpoints cannot supply today (week-over-week trends, notifications, overdue counts). Listed with suggestions. |

## At a glance

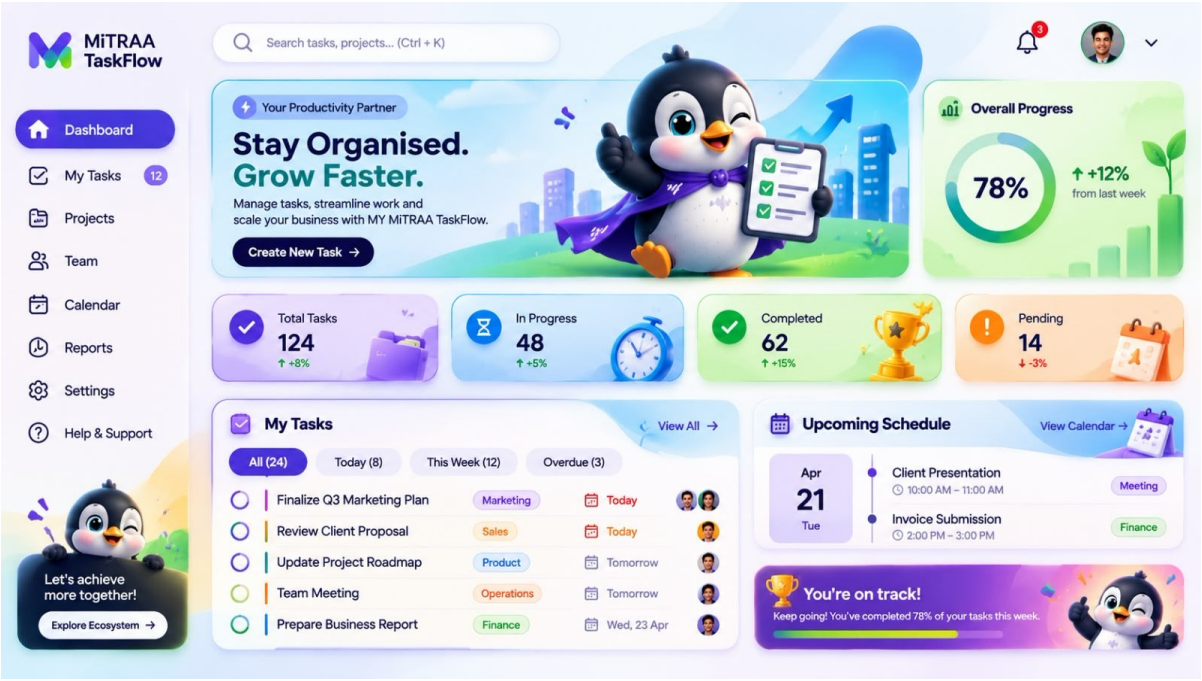

MiTRAA TaskFlow is the internal project-management web app used to track tasks, meetings, leave, weekly project status and shared documents. Eight screens are specified; Task Tracker and four more menu entries have no capture yet.

| Screen | Route | What it is for |
|---|---|---|
| Home Dashboard (new) | / (proposed) | Landing page: my progress, my tasks, what is coming up |
| Reports (was Dashboard) | /task-dashboard | Charts for status, effort, meeting time and leave |
| Meeting Tracker | /meeting-tracker | Log and search meetings by customer, project, module and team |
| Leaves / WFH Tracker | /leave-wfh-dashboard | See leave, WFH and holidays on a month calendar |
| Project Status | /project-weekly-status | Weekly status of each project: people, environments, progress |

| Screen | Route | What it is for |
|---|---|---|
| View Documents | /task-upload-files | Find, preview, download and delete files uploaded against tasks |
| Calendar View | /users/task-calendar-view | See each project's tasks as bars on a month calendar |
| Dropdown Management | /users/dropdown-management | Maintain the lists other screens pick from, such as Task Owner |

## Design direction

Every screen follows the reference mockup below. Developers and designers should treat it as the target for spacing, shape and colour, and the rules in this section as the written version of it.

*Reference mockup: MiTRAA TaskFlow home dashboard*

## Palette

Five brand colours, taken from the palette image. Contrast is measured against white and against Charcoal so text is never placed on a colour that cannot carry it.

| | Colour | Used for | Contrast |
|---|---|---|---|
| | **Violet** #7B3AEC | Brand colour: active menu pill, focus ring, links, Open status, primary chart series | 5.7:1 on white<br>3.1:1 on Charcoal |
| | **Fuchsia** #D946EF | Accent: second half of banner gradients, On Hold status, highlights | 3.5:1 on white<br>5.1:1 on Charcoal |
| | **Lime** #A3D801 | Positive: Closed status, approved WFH, progress fill, success | 1.7:1 on white<br>10.4:1 on Charcoal |
| | **Sky Blue** #00A6FC | Information: In Progress status, secondary chart series, info icons | 2.7:1 on white<br>6.6:1 on Charcoal |
| | **Charcoal** #191627 | Text, dark buttons (such as Create New Task), the sidebar mascot card | 17.7:1 on white<br>1.0:1 on Charcoal |

**Contrast rule.** Lime and Sky Blue are too light for text on white (a text ratio of 4.5:1 is the minimum), and Fuchsia only passes for large text. Use these three as fills, bars, icons and borders, with Charcoal text on top of them. Violet and Charcoal can carry text on white. On a Charcoal background use white, Lime or Sky Blue for text; Violet (3.1:1) does not pass.

**Colours outside the palette.** The palette has no warning or error colour, and the screens need both (delete bins, Data Not Available, overdue, the “people not filling tasks” alert). Add two functional colours: Red for errors, destructive actions and Critical (P0), and Amber for warnings and overdue. Exact values are for design to set.

## Colour meaning (proposed)

The live screens use colours with no fixed meaning (the charts use a different colour for almost every series). From now on one colour always means one thing. This also settles two open questions from the first BRD: the colour of unapproved WFH and the meaning of the green outline on Calendar View.

| Where | Value | Colour |
|---|---|---|
| Task status | Open / In Progress / Closed / On Hold | Violet / Sky Blue / Lime / Fuchsia |
| Task status | Overdue | Amber (functional) |
| Priority | Critical P0 / Urgent P1 / Normal P2 / Low P3 | Red / Fuchsia / Sky Blue / grey |
| Leaves / WFH | Leave / Unplanned Leave / WFH (Approved) / WFH (Unapproved) / Holiday | Violet / Amber / Lime / Sky Blue with dashed border / Fuchsia |
| Charts | More than five series | Order: Violet, Sky Blue, Lime, Fuchsia, Charcoal, then tints of the same five; group the smallest into Others rather than adding new hues |

### Shape, type and mascot

- **Cards and controls** have large rounded corners, a soft shadow and a very light tint of their own colour (a neutral lavender for Total, sky blue for In Progress, lime for Closed and violet for Open; the reference's orange Pending tint is not used because orange is not a palette colour). Numbers sit on a flat tint, never on an illustration.
- **Backgrounds** are white to very light violet gradients. Text is Charcoal; secondary text must still pass 4.5:1 (the reference's light grey dates and captions do not).
- **Buttons.** The main action is a dark Charcoal pill with white text and an arrow (Create New Task in the reference). Secondary actions are outlined. This replaces the outlined blue Add New button, so the common Add button rule changes with it.
- **Typeface** is a rounded sans-serif with heavy headings; the exact font is to be chosen by design and must support the languages users type in.
- **Mascot (penguin).** It appears three times on the Home Dashboard (welcome banner, sidebar card, progress banner), once in the sidebar card on every other screen, and in empty and error states. It is never placed on top of data. Production needs separate transparent artwork for at least four poses (waving, thumbs-up with clipboard, celebrating, empty or confused), and the company must hold the rights to it.

## Users and the common layout

Every screen sits inside the same frame so a user learns it once. The only role visible in the captures is Production Engineer; whether other roles see different menus or buttons is still not shown.

| Element | Where | Behaviour |
|---|---|---|
| Logo | Top of sidebar | Product mark and name. Replaces the Optima logo. |
| Sidebar | Left | Rounded panel. The open screen is a filled violet pill with white text. A small arrow collapses it to icons only. 12 entries plus Help & Support, grouped (see Menu). |
| Search | Top bar, left | One rounded box: "Search tasks, projects…" with a Ctrl+K (Cmd+K on Mac) shortcut. A field selector inside the box keeps the current Search Parameter behaviour (the field list comes from each module's get_parameter_list). Replaces the Search Parameter drop-down and box at the bottom of the menu. |
| Notification bell | Top bar, right | Opens a list of notifications with an unread count. No endpoint exists, so the bell is hidden until one does (see API gaps). |
| User menu | Top bar, far right | Avatar, then a chevron. Opens name, role (Production Engineer), Change Password and Sign out. Replaces the user card in the sidebar and the power icon. |
| Mascot card | Sidebar, bottom | Penguin with "Let's achieve more together!" and an Explore Ecosystem button. Hidden when the sidebar is collapsed. Where the button leads is an open question. |
| Page header | Top of content | Page title on the left and the main action on the right. |

### Menu

The reference shows eight entries, but the app has twelve screens, and nine of them are missing from the reference. All twelve stay. They are grouped, and the old Dashboard becomes Reports. “Projects” and “Team” in the reference have no screen or API behind them and are not built in this version.

| Group | Entry | Route | Note |
|---|---|---|---|
| Work | Dashboard | / (proposed) | New Home Dashboard |
| Work | Task Tracker | not shared | No capture yet. Shows a badge with my open tasks (same number as the All tab on Home). |
| Work | Calendar View | /users/task-calendar-view | |
| Work | Timeline View | not shared | No capture yet |
| Team | Meeting Tracker | /meeting-tracker | |
| Team | Leaves / WFH Tracker | /leave-wfh-dashboard | |
| Team | Project Status | /project-weekly-status | Fills the “Projects” slot in the reference |
| Team | Event Management | not shared | No capture yet |
| Files and assets | View Documents | /task-upload-files | |
| Files and assets | Device Inventory | not shared | No capture yet |
| Insights and admin | Reports | /task-dashboard | Was Dashboard. Fills the “Reports” slot |
| Insights and admin | Productivity Loss | not shared | No capture yet |
| Insights and admin | Dropdown Management | /users/dropdown-management | Name must wrap or truncate with a tooltip; it is cut off today |
| Bottom | Help & Support | not shared | In the reference; content is an open question |

## Common UI rules

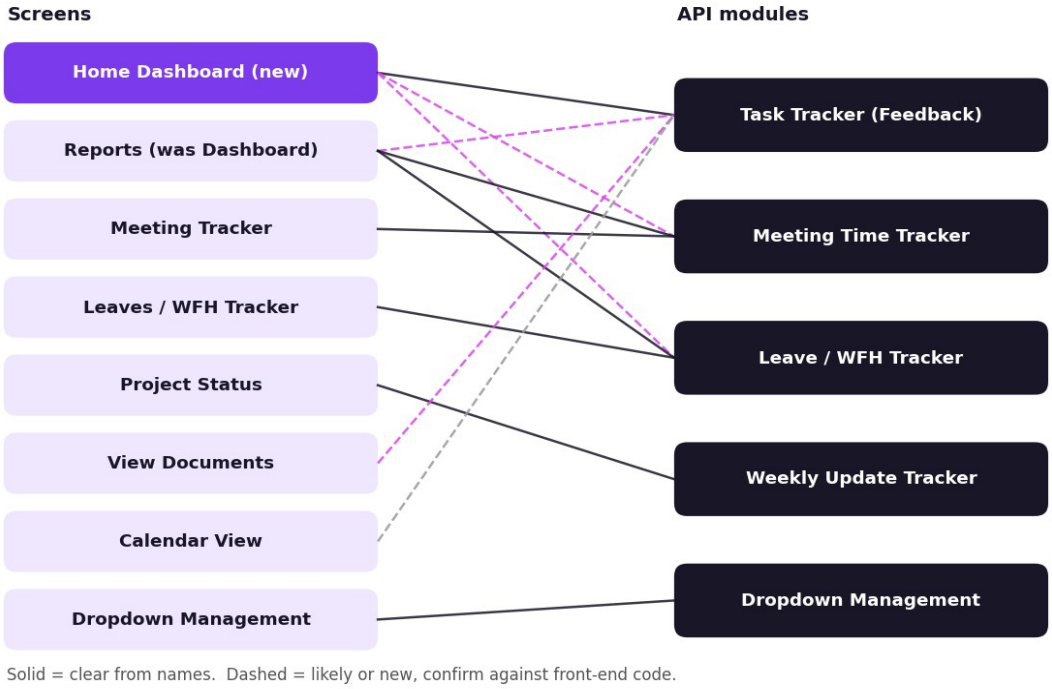

The screens repeat the same few patterns. Build them once as shared components, in the new style.

| Pattern | Rule |
|---|---|
| Filters | Drop-downs and text boxes sit above the data in a row that wraps onto a second line instead of cutting labels; a Search button applies them. Clear Filters appears wherever there are more than three filters (today only View Documents has it). |
| Date range | One box holds both dates. Display format is DD-Mon-YYYY – DD-Mon-YYYY (for example 01-Oct-2026 – 31-Oct-2026). Today the ranges are written MM/DD/YYYY, which is unreadable for anyone used to day-month order. |

| Pattern | Rule |
|---|---|
| Dates in tables | DD-Mon-YYYY everywhere (03-Sep-2026). Never 09-01-2026. |
| Main action | The Charcoal pill button in the page header (Add New, or Add Task Owner on Dropdown Management). |
| Download | A small icon button at the right of the filter row on Meeting Tracker, Project Status and Dropdown Management. |
| Tables | Light header row, the Actions column first, newest records first, rounded container, horizontal scroll only when columns do not fit. |
| Row actions | Meeting Tracker: three-dot menu. View Documents: download, view (eye), delete. Dropdown Management: edit (pencil), delete. Delete always asks for confirmation first. |
| Status chips | Rounded chips in the status colours above, with the status name written out (In Progress, never In_Progress). |
| Paging | Items per page plus a range such as 1 – 10 of 50 with previous and next arrows. Sizes: 10, 25 and 100. |
| Empty result | Small mascot and the words Data Not Available. It replaces the data area; it is never printed under existing rows. |
| Loading and error | Loading shows grey placeholder shapes in the layout of the data. An error shows a short message and a Retry button. |
| Calendars | Month grid with previous, next and today buttons. Entries are coloured bars that span their days; extra entries collapse into +N more. No licence banner. A truncated bar shows its full text on hover. |
| Charts | Palette order as above. Totals printed under or inside the chart; hovering a bar shows owner, team and hours. Labels never overlap. |

## Screen map

Five API modules serve the eight screens. Home Dashboard and Reports each draw on three modules.

*screen to API map · 8 screens, 5 modules*

Solid lines are matches that are clear from names. Dashed lines are likely or new links to confirm against the front-end code. Two modules have no screen yet: Task Owner Email (one endpoint) and Global File Uploads (31 endpoints).

## Home Dashboard (new)

Route / (proposed). The first page after sign-in. It answers three questions in a glance: how am I doing, what is on my plate, and what is coming up. API modules: Task Tracker, Meeting Time Tracker and Leave / WFH Tracker. Layout follows the reference exactly; the content below replaces the sample content in it.

| ID | Requirement | Change |
|---|---|---|
| HD-1 | **Welcome banner.** Tag line (“Your Productivity Partner”), headline (“Stay Organised. Grow Faster.” in the reference), one sentence, a **Create New Task** button that opens the Task Tracker add form, and the mascot on the right. Copy is placeholder until marketing signs it off. The product name in the sentence is the same as the logo (the reference writes “MY MiTRAA TaskFlow” in capitals). | New |
| HD-2 | **Overall Progress card.** A ring showing Closed ÷ Total work items for the chosen period, the same two numbers as the KPI cards. The reference shows 78% beside 62 closed of 124 total (50%), which cannot both be true; this build must use one formula everywhere. A “from last week” trend shows only when the backend can supply it. | New |

| ID | Requirement | Change |
|---|---|---|
| HD-3 | **Four KPI cards:** Total Tasks, In Progress, Closed and Open, each with a soft illustration, as in the reference. On Hold is shown as a small line inside the Total card, so the rule Total = Open + In Progress + Closed + On Hold always holds. Trend arrows (such as +8%) show only with backend support, and their colour follows meaning: fewer Open tasks is good, so a fall is green. | New |
| HD-4 | **My Tasks.** Tabs All, Today, This Week and Overdue, each with a count. Each row shows ticket number (for example AECKUWAIT-422), task title, a Team chip (QA, Project Management, Mobile Development, BE Development, FE Development), a Priority chip, the due date, and the owner. The reference's Marketing, Sales, Product, Operations and Finance chips are not in the data and are not used. **View All** opens Task Tracker with the same filter. The count on All equals the badge on the Task Tracker menu entry (the reference shows 24 and 12). | New |
| HD-5 | **Upcoming Schedule.** A date tile and a list of the next entries from the Leaves / WFH Tracker (leave, WFH, holidays such as Dussehra) and the Meeting Tracker, each with a coloured type chip and time where one exists. **View Calendar** opens Leaves / WFH Tracker. Finance or invoice items in the reference do not exist in the system. Whether future meetings are stored at all is an open question: the Meeting Tracker looks like a log of meetings already held, newest first. | New |
| HD-6 | **Progress banner** ("You're on track!") with the mascot and a fill bar. It repeats the Overall Progress number rather than showing its own, and its wording changes with the value (for example "Needs attention" below a threshold set by the business). | New |
| HD-7 | **Period selector.** The page covers the current month by default, the same Month range the old Dashboard used (01-Oct-2026 – 31-Oct-2026), and a date-range box lets the user change it. | New |
| HD-8 | **People not filling tasks** (9 people in the capture) shows as an amber strip under the KPI cards for users who are allowed to see it. Which roles can see it is an open question. | New |
| HD-9 | Each panel has its own loading, empty and error state, so one failing call never blanks the page. | New |

## Existing screens, with what changes

IDs are unchanged from the first BRD so existing tests still map. The last column says what the redesign does to each requirement: **Keep** (no change beyond the new style), **Restyle**, **Changed** (behaviour or content changes) or **New**.

### Dropdown Management

Route /users/dropdown-management. Maintain the value lists other screens pick from; the capture shows Task Owner. API module: Dropdown Management.

| ID | Requirement | Change |
|---|---|---|
| DM-1 | A **DropDown Details** selector chooses which list to manage. Task Owner is selected in the capture. | Restyle |

| ID | Requirement | Change |
|---|---|---|
| DM-2 | The main-action button is named after the chosen list (**Add Task Owner**) and sits in the page header. | Restyle |
| DM-3 | A second drop-down and a **Search** button narrow the list. The filter row wraps so the labels read in full (today they read S..., Sear and 01.). | Changed |
| DM-4 | A date-range box and two blue arrows sit at the right of the filter row. The arrows are probably download and upload. The controller has a download call but **no upload call**, so the second arrow needs a decision before it is built. | Changed |
| DM-5 | The table shows S.No, Actions (edit, delete), Recorded Date, Task Owner and Comments. Dates show as DD-Mon-YYYY (the capture shows 09-01-2026). | Changed |
| DM-6 | Paging defaults to 25 items per page and reads 1 – 2 of 2 in the capture. | Keep |

## Meeting Tracker

Route /meeting-tracker. Records every customer or internal meeting and makes them searchable; the capture holds 657 meetings. API module: Meeting Time Tracker.

| ID | Requirement | Change |
|---|---|---|
| MT-1 | **Add New** opens a form to log a meeting. The form fields were not captured. | Restyle |
| MT-2 | The filter row holds a Search Parameter drop-down (its label reads in full; today “Search P...”), a **Search** button, a date range (starts 01-Jan-2026) and a download icon. | Changed |
| MT-3 | Visible columns are Action (three-dot menu), Date, Customer, Project, Module and Team; more columns sit off-screen to the right. | Keep |
| MT-4 | Meetings are listed newest first, dates like 30-Oct-2026. | Keep |
| MT-5 | Paging defaults to 100 per page and reads 1 – 100 of 657. | Keep |
| MT-6 | Values seen: Team is QA, Project Management, Mobile Development, BE Development or FE Development; Module is All Module, All Modules, Project Requirements or Internal Meeting. “All Module” and “All Modules” mean the same thing and must become one value in Dropdown Management. Internal meetings use Customer “Internal”. | Changed |
| MT-7 | Customer and Project hold the same text in almost every row (for example NextGen and NextGen). Keep both columns until the business confirms they can differ. | New |

## Leaves / WFH Tracker

Route /leave-wfh-dashboard. A month calendar of who is on leave, working from home or off for a holiday. API module: Leave / WFH Tracker.

| ID | Requirement | Change |
|---|---|---|
| LW-1 | **Add New** records a leave, WFH day or holiday. | Restyle |

| ID | Requirement | Change |
|---|---|---|
| LW-2 | A month calendar (October 2026 in the capture) with previous, next and today buttons. The “Your license key is invalid” banner is removed. | Changed |
| LW-3 | Each entry reads Name (Type), for example Vivek (Planned Leave), and runs as one bar across all its days. | Keep |
| LW-4 | Colour shows the type, using the Colour meaning table: Leave violet, Unplanned Leave amber, WFH (Approved) lime, WFH (Unapproved) sky blue with a dashed border, Holiday fuchsia. | Changed |
| LW-5 | A legend directly under the calendar lists the five types: Holiday, WFH (Approved), WFH (Unapproved), Leave and Unplanned Leave, each with its colour. | Changed |
| LW-6 | A day with more entries than fit collapses into **+N more**, the same as Calendar View. | New |

## Project Status

Route /project-weekly-status. A weekly board where each project reports its people, environments and progress. The capture shows the row labels only. API module: Weekly Update Tracker.

| ID | Requirement | Change |
|---|---|---|
| PS-1 | **Add New** creates a weekly update. | Restyle |
| PS-2 | Filters: Project Status, Priority, Customer Geography and Select Week. Every box shows a drop-down arrow and its full value (the week box reads “Oct 2” today). | Changed |
| PS-3 | A banner names the week Monday to Friday, for example Mon, 26-Oct – Fri, 30-Oct-2026. | Keep |
| PS-4 | The board is grouped. People: UX Designers, BE Developers, Python Developers, Testers, Shared Resources. Total Env: Dev URL, QA URL, LA URL, Other URL. Status: Last Week Status, Current Status, Next Steps. | Keep |
| PS-5 | A download icon sits at the right of the filters. | Keep |
| PS-6 | With no records the grid area shows the mascot and **Data Not Available**; the message does not print under the row labels. | Changed |

The API can also attach documents to a weekly update and email the weekly report, but no button for either appears in the capture (see open questions).

## View Documents

Route /task-upload-files. Users find files attached to tasks, then download, preview or delete them, and upload a new one. API module: Task Tracker (likely).

| ID | Requirement | Change |
|---|---|---|
| VD-1 | Seven filters: Customer, Project, Task Team, Task Owner, Search By Ticket No, Task Status and Task Priority. | Restyle |
| VD-2 | **Search** applies the filters and **Clear Filters** resets them. | Keep |

| ID | Requirement | Change |
|---|---|---|
| VD-3 | A date range (01-Oct-2026 – 31-Oct-2026 in the capture) and an upload icon. After a file is picked, its name shows in a small chip beside the icon (today it appears in large type over the date box). | Changed |
| VD-4 | The table shows Action (download, view, delete with confirmation), Uploaded Date such as 03-Sep-2026, Customer, and more columns off-screen. | Keep |
| VD-5 | The date range is applied to the list. The capture shows files from Mar 2026 back to Oct 2025 under an October 2026 range. | Changed |
| VD-6 | Paging defaults to 10 per page and reads 1 – 10 of 50. | Keep |

## Calendar View

Route /users/task-calendar-view. Tasks of one project drawn as bars on a month calendar so the team sees what overlaps. API module: Task Tracker (a guess).

| ID | Requirement | Change |
|---|---|---|
| CV-1 | A **Project** selector chooses the project (AEC Kuwait in the capture). The label is spelled Project (it reads “Prcject” today). | Changed |
| CV-2 | A Status panel with four chips: Closed, In Progress, Open and On Hold, in the status colours. | Restyle |
| CV-3 | A month calendar (October 2026) with previous, next and today buttons. The licence banner is removed. | Changed |
| CV-4 | Each task is a bar labelled Owner – Ticket, for example Ajay – AECKUWAIT-422, stretched across its dates. Bar colour is the task status. The green outline on some bars in the capture is dropped unless the business says what it means. | Changed |
| CV-5 | When a day holds more bars than fit, a **+N more** link shows the rest. | Keep |
| CV-6 | Hovering a truncated bar (“Bharat – AECKUWAIT-…”) shows the full owner, ticket, status and dates. | New |

## Reports (was Dashboard)

Route /task-dashboard. One screen holds four chart views, each with its own filters and Search button; hovering a bar shows owner, team and hours. API modules: Task Tracker (likely), Meeting Time Tracker and Leave / WFH Tracker. Renamed from Dashboard so the menu has one Dashboard (Home) and one Reports.

| ID | View | Filters | What it shows, and what changes |
|---|---|---|---|
| DB-1 | Status overview | Project, Date Type (Actual Date), Duration (Month), Month Range | A donut with the total work items (320 in the capture: 287 Closed, 32 In Progress, 1 Open). Bars for Priority Breakdown (Critical P0 4, Urgent P1 112, Normal P2 203, Low P3), Team Workload (tasks per person; one person has 69, far above the rest) and Type Breakdown. An alert, People not Filling Tasks in Project Management Tool, gives a count (9) and the names. **Changes:** status names written out (In Progress, not In_Progress), status and priority colours from the colour meaning table, alert in amber. |
| DB-2 | Effort | Project, Task Owner, Task Team, Date Type, Duration, Month Range | Daily bars of hours for the chosen owner, split by project and Meeting Time (136.00 hrs for the month). Then Task Effort Distribution by Owner and Team, Task Effort by Owner and Project, and Project vs Actual Effort; the grand total (2975.78 hrs) prints under each chart. **Changes:** ordered palette, group small projects into Others, value labels no longer overlap, chart no longer cut off. |
| DB-3 | Meeting time | Project, Duration, Month Range | One stacked bar per person, in minutes, split by project, with labels such as 52h or 2h 45m and a project legend. **Changes:** ordered palette and Others grouping; the legend is never cut off. |
| DB-4 | Leaves / WFH | Team, Duration, Month Range | A pie, Leaves / WFH Distribution Overview (Planned Leave 28 days, WFH Approved 14 days, Unplanned Leave 1 day), and a bar chart, Leave & WFH Summary. **Changes:** leave colours from the colour meaning table; “1 day”, not “1 days”. |

### Screens with no capture

Task Tracker, Timeline View, Device Inventory, Event Management and Productivity Loss are in the menu but have no capture, so they are not specified. **Task Tracker matters most:** it is the biggest module (24 endpoints) and Home Dashboard (My Tasks, Create New Task, KPI cards) depends on it. Please send captures of its list, add and edit forms, sub-tasks, assign, close and worklog screens. The Add and Edit forms of every screen, the Change Password window and the sign-in page are also still missing.

## Form fields (from the data models)

The Add New and Edit forms on these screens were not captured, so the fields below come from the data classes. Which ones are required, the length limits and the exact dropdown values are still to be confirmed (the Rule column is blank on purpose).

### Meeting Tracker form

| Field | Control | Source | Rule |
|---|---|---|---|
| Date | Date picker | date | |
| Customer | Dropdown | customer | |
| Project | Dropdown | project | |
| Module | Dropdown (follows Project) | module | |
| Team | Dropdown | team | |

| Field | Control | Source | Rule |
|---|---|---|---|
| Category | Dropdown | category | |
| Meeting by | Dropdown or text | meeting_by | |
| Meeting with | Multi-select | meeting_with | |
| Lead attended | Tick box | lead_attended | |
| Architect attended | Tick box | architect_attended | |
| Start time, End time | Time pickers | start_time, end_time | |
| Total time | Read-only, calculated | total_time | Confirm it is calculated |
| Comments | Text area | comments | |

## Leaves / WFH form

| Field | Control | Source | Rule |
|---|---|---|---|
| Name | Dropdown (default: signed-in user) | name | |
| Role | Dropdown or text | role | |
| Start date, End date | Date range | start_date, end_date | |
| Day | Full day / half day | day | Values to confirm |
| Type | Leave / WFH / Holiday | leave_type | Values to confirm |
| Comments | Text area | comments | |

## Project Status form (one project, one week)

| Field | Control | Source | Rule |
|---|---|---|---|
| Project name, Customer, Geography, Industry | Text or dropdown | project_name, customer_name, customer_geography, industry | |
| Status, Current state, Current status, Project status, Last week status | Dropdown or text | state, current_state, current_status, project_status, last_week_status | |
| Priority, Risk, Summary | Dropdown, dropdown, text area | priority, risk, project_summery | |
| Start date, Go-live date | Date pickers | start_date, go_live_date | |
| Week from, Week to | Date pickers | weekly_start_date, weekly_end_date | |
| Code base, Documentation, KT provider, Reference | Text | code_base, documentation, kt_provider, ref | |
| HLD link and files, LLD link and files | Link plus file upload | hld_link, hld_attachment, lld_link, lld_attachment | |
| Testers, FE, BE, Python developers, UX designers, Shared resources | Multi-select chips | testers, fe_developers, be_developers, python_developers, ux_designers, shared_resources | |
| Total environments | Number | totalEnv | |
| Dev, QA, LA, Other links and arrow toggles | Link plus on/off switch | dev_url, dev_arrow, qa_url, qa_arrow, la_url, la_arrow, other_url, other_arrow | Arrow on by default |

### Calendar View and Timeline View: data rule

Both screens show the signed-in user's tasks. The user comes from the sign-in token, so there is no user picker for ordinary users; a manager role may get one (to confirm). They read the Task Tracker with get_all_feedback or advance_search. Bars run from estimated start date to estimated close date, coloured by status, with owner, project and priority as filters. Each task also holds a work log (rows of date, hours, description); the Task Tracker screen that edits it has no capture yet. Timeline View has no capture yet; it is specified here only from this rule.

## Reference mockup: what is adopted

The aim is to match the reference. Where the reference shows something the system cannot do, or something that contradicts the data, this table says what is built instead.

| Reference element | Decision | What is built, and why |
|---|---|---|
| Logo and name "MiTRAA TaskFlow" | Adopt (confirm) | Used as the product name in this version. The name is an open question. |
| Violet sidebar with rounded icons | Adopt | Active entry is a filled violet pill. Collapse arrow kept. |
| Menu: My Tasks, Projects, Team, Calendar, Reports, Settings, Help | Adapt | Mapped onto the 12 real screens (see Menu). Projects becomes Project Status, Reports is the old Dashboard, Team and Settings are not built. |
| Top search with Ctrl+K | Adapt | Keeps the Search Parameter field selector inside the box. |
| Notification bell with count | Defer | No notification endpoint exists. Hidden until one does. |
| Avatar with chevron | Adopt | Menu adds name, role, Change Password and Sign out. |
| Welcome banner with penguin | Adopt | Home only. Copy is placeholder. |
| Overall Progress ring (78%) | Adopt | Formula fixed to Closed ÷ Total; the reference's 78% contradicts its own 62 of 124. |
| Four KPI cards with illustrations | Adopt | Labels use real statuses (Total, In Progress, Closed, Open). Numbers sit on flat tint. |
| Percent trend arrows | Defer | The API returns counts only. Shown once the backend adds a previous-period figure. |
| My Tasks tabs and rows | Adapt | Team, Priority and ticket number replace Marketing, Sales and Finance chips. |
| Several avatars on one task | Adapt | One owner shown, unless the business confirms tasks can have several. |
| Upcoming Schedule | Adapt | Leave, WFH, holidays and meetings; no Finance items. |
| "You're on track!" banner | Adopt | Same number as the ring; wording follows the value. |
| Sidebar mascot card, Explore Ecosystem | Adopt | Where the button leads is an open question. |

| Reference element | Decision | What is built, and why |
|---|---|---|
| Dates such as Apr 21 and Wed, 23 Apr | Drop | The app is dated October 2026, and one format (DD-Mon-YYYY) is used everywhere. |

## API gaps for the redesign

Nothing here stops the existing screens. These are the points where the new Home Dashboard needs more than the 102 endpoints give today.

| Need | Today | Suggestion |
|---|---|---|
| Trend vs last period (KPI cards, progress ring) | feedback_numerical_count returns counts only. | Return the previous period's counts in the same call. |
| My Tasks tabs (Today, This Week, Overdue) and counts | advance_search and get_all_feedback take a SearchVM; its fields were not shared, so a "mine" or "overdue" filter is unconfirmed. | Share SearchVM and confirm owner and due-date filters, or add a /my_tasks_summary call. |
| Upcoming meetings | Meeting Time Tracker looks like a log of past meetings. | Confirm whether future meetings are stored; if not, show leave, WFH and holidays only. |
| Notifications | No endpoint. | Add list and mark-as-read calls, or leave the bell out. |
| Profile, Change Password, Sign out | The authentication controller was not shared. | Share it so the user menu can be specified. |
| Profile photo for the avatar | No field seen. | Show initials until a photo field exists. |
| Upload on Dropdown Management | No upload endpoint in its controller. | Remove the second arrow, or add the endpoint. |

## Issues seen in the current screens

Ten visible problems in the captures, most serious first. The right column says how this version fixes each.

| # | Screen | What we saw | Fix |
|---|---|---|---|
| 1 | Calendar View, Leaves / WFH | A banner says Your license key is invalid. | Add or renew the calendar component's licence key (CV-3, LW-2). |
| 2 | View Documents | Files from Mar 2026 back to Oct 2025 are listed under an October 2026 range, and Data Not Available prints under the rows. | Apply the date range; show the message only when there are no rows (VD-5). |
| 3 | View Documents | The picked file's name appears in large type over the date box and upload icon. | Small chip beside the icon (VD-3). |

| # | Screen | What we saw | Fix |
|---|---|---|---|
| 4 | Dropdown Management | The filter row is squeezed: the drop-down reads S..., the button Sear and the date box 01. | Filter row wraps (DM-3). |
| 5 | Several | Dates appear as 09-01-2026, 03-Sep-2026 and MM/DD/YYYY ranges. | DD-Mon-YYYY everywhere (Common UI rules). |
| 6 | Calendar View, menu, others | Prcject for Project; menu item cut to Dropdown Manager; Search P... on Meeting Tracker; week box reads Oct 2. | Fix spelling; labels wrap or show a tooltip. |
| 7 | Reports, Meeting Tracker | In_Progress with an underscore; 1 days; All Module and All Modules both used. | One wording per value (MT-6, Reports). |
| 8 | Reports | Series use many unrelated colours, the Task Effort labels overlap, and some charts are cut off at the page edge. | Ordered palette, Others grouping, no overlap (DB-1 to DB-4). |
| 9 | Project Status | Data Not Available prints under the row labels rather than in place of the grid. | Mascot empty state in the grid area (PS-6). |
| 10 | Dropdown Management | The second blue arrow has no matching API call. | Decide: remove it or add the endpoint (DM-4). |

## Open questions

- ☐ What is the product called: MiTRAA TaskFlow (reference), MyMitraa (first BRD) or Optima (live screens)? Which logo is used?
- ☐ Where does the Explore Ecosystem button lead, and what does Help & Support contain?
- ☐ What is the exact definition of Overall Progress, and what threshold turns “You’re on track!” into “Needs attention”?
- ☐ Can a task have more than one owner (the reference shows two avatars)? Is there a profile photo?
- ☐ Are future meetings stored, so Upcoming Schedule can list them?
- ☐ Should the notification bell be built now (needs new endpoints) or left out of version 1?
- ☐ Which user roles see which menu items, buttons and the “people not filling tasks” strip?
- ☐ What do the two blue arrows on Dropdown Management do, and is there an upload endpoint?
- ☑️ Calendar View and Timeline View use get_all_feedback or advance_search with the user from the token. Still open: what the green outline on the bars means.
- ☐ Should Project Status show buttons for attaching documents and emailing the weekly report?
- ☐ Do Task Owner Email and Global File Uploads have screens of their own?
- ☐ Who owns the penguin artwork, and can transparent versions in four poses be supplied? Which font is used?
- ☑️ Form fields: listed above from the data models. Still open: which are required, limits, and dropdown values.
